

What Our Clients Say About Acti-Zyme

We started using Acti-Zyme about 4 years ago and we have been very happy with the effectiveness of the product. We use the LS7 (F.O.G.) product in our lift stations on a weekly basis and have seen a very noticeable decrease in the amount of grease build up, not only in our stations, but throughout our collection system and at our wastewater treatment facility. We constantly had a thick mat of grease in a chamber right before our first lagoon that required constant maintenance. Since we started using the Acti-Zyme product, the mat is gone and has not come back. What grease that still exists is much more manageable when our regular cleaning takes place. I have noticed that since using LS7 that our stations and other infrastructure is much easier to clean, cutting down in maintenance costs. I would recommend using this product.”
Doug Hagen, District of Invermere, BC

“After one year our sewer lines are clear, no fat, they are spotless. Acti-Zyme doesn’t do exactly what they say it would do, it does more. I am an advocate, because it works.”
William Lyons, Bow Island, AB

“The Town of Nipawin had issues with lard build up in our sewage lift pump manholes as the floats and pipe elbows accumulated lard. We put LS7 in the sewer pipe according to Acti-Zyme’s recommendations and we later videoed the sewer line. The video showed that about 80% of the lard was gone off the pipes allowing the sewer to flow. The Town regularly puts LS7 into our lift stations and manholes downstream about once every couple of weeks to keep pipes clear from lard building up.”
Rick Dabek, Utilities Foreman, Nipawin, SK.

Fats, Oils & Grease Removal
Biological Treatment Products

**For use in lift stations and
wastewater collection lines.**

Digests Fat, Oil, & Grease Build up
Decreases Odor

Tested and Proven Technology
New & Improved Formulas
Reduces Manual Removal
Cleans Pipes and Lift Stations

65 Years of Proven Success

Acti-Zyme LS7

Acti-Zyme LS7 is an enhanced biocatalyst product for improved breakdown, treatment and management of fat, oil and grease built up in lines, lift stations, & grease traps.

“An 18 inch line under the Old Man River had completely plugged due to a grease build-up. Acti-Zyme said we could apply LS7 and remove the plug without any expensive mechanical intervention. Within 2 weeks, flow began to return through the pipe. The enzymes moved the grease blockage so we were able to reach it and remove the grease plug. This fix was considerable less expensive and much easier than trying to bring equipment into that pipe under the river. We now use this product weekly to keep the grease from building up.”
Brent Hamilton, Town of Taber, AB

LS7 is NOT a Surfactant

For an efficient way to deal with FOG use Acti-Zyme's LS7 formula that contains fat grown bacterial consortium. These bacteria crave fat, oils and grease and deliver the right enzymes such as lipase and esterase that quickly and effectively digests the fat molecules. When used as recommended LS7 breaks down the fat, oils and grease and does not re-solidify. This solution really transforms any lift station or grease trap into a bioreactor.

**Full 24 km Pipeline Rehabilitation within 1 month.
No manual removal needed when using Acti-Zyme.**

“Once we started using the product, we noticed that it was working quite well so we kept using it. At our lift station we are using 1 bag every 3 days and at our lagoon during the summer we use 4 bags every 3-6 days which is showing progress right away. Also the product is making a big difference in our sewer lines and cleans up the sludge well.”
Joshua Nelson, Weyakwin, SK

“We have used Acti-Zyme for 20 years. It is an amazing product. We use it in our lagoon, lift stations and man holes. The lagoon was cleaned out recently for the first time since 1990 with very little sludge. Our lift stations are almost odorless. The difference is day and night not using Acti-Zyme.” Malcolm Mathews, Foremost, AB

**Reclamation of heavily overloaded lift station.
No heavy equipment or labour needed.**

Non-toxic, all natural, biological technology for rehabilitation and maintenance of wastewater systems.
