Lift Stations***

65 Years of Proven Success

Acti-Zyme BF-AZ

Acti-Zyme BF-AZ is an enhanced biocatalyst product for improved breakdown, and treatment of blood, fat, oil and grease built up in lines, grease traps found in slaughter houses and meat processing plants.

"We have a meat processing plant client that has been using our products for over 50 years with great success breaking down its high strength waste. It really helps cleanup a system and maintains it clean and running properly"

Bill Powell, CEO, Acti-Zyme

SHMP is NOT a Surfactant

For an efficient way to deal with hard to breakdown blood, fat and grease, Acti-Zyme's BF-AZ formula contains specifically grown bacterial consortium that attacks the hard to breakdown proteins found in blood. When used as recommended BF-AZ breaks down the blood, fat, oils and grease and does not re-solidify.

**IMPORTANT: Acti-Zyme products digest soft organic matter, preferably in water. Results may vary depending upon situational variables. Dosage treatments may require more or less product in order to remove the desired level of sludge and undesirable nutrients.*
