

What Our Clients Say About Acti-Zyme

"I have had a septic tank for 41 years and have been using Acti-Zyme for all these years. I have only had the tank pumped once in 41 years and the fellow said that the tank really **didn't need to be pumped**. Our tank is fairly small for a home with 5 bedrooms. It's just my wife and myself now, but each year in the summer we have 10 - 12 family members visiting and I worry that the septic tank will give problems. So far, Acti-Zyme has kept our **septic system problem free**. I think of Acti-Zyme as reasonably priced preventative maintenance for our septic system."

Dr. Don Hunt, Kaslo, B.C., Canada

"Acti-Zyme has been in use in our two-compartment septic tank for the past 38 years. Since its use our cast iron sewage pump is free of buildup. **Our sewage liners are clean**. The pump out water is clear and practically odorless. We highly recommend it's use."

Joyce & Glenn Laycock, Saltcoats, SK, Canada

"We were long-time users of Acti-Zyme (had an acreage and septic system for 26 years) and used it in the toilets. When we sold and the purchasers had the system inspected **it was very clean and I credit Acti-Zyme for that**. We were also very careful of what went down the drains also – essentially, if you can't eat it, it doesn't go down the drain."

Bill S. B.C., Canada

Industrial Strength

Acti-Zyme's Septic Tank Treatment is composed of a proprietary combination of aerobic, anaerobic and facultative anaerobic microbes, enzymes, nutrients and neutralizers for optimal performance.

These ingredients provide the ideal solution to managing residential wastewater and sludge buildup. Acti-Zyme products have been used in industrial and municipal systems for over 60 years with proven success.

Expected Results

- Liquefies Solids
- Decreases Odour
- Increases Life Span of Fields
- Increases Capacity
- Cleans Pipes and Traps
- Removes Pathogens
- Stabilizes pH

**IMPORTANT: Acti-Zyme products digest soft organic matter, preferably in water. Results may vary depending upon situational variables. Dosage treatments may require more or less product in order to remove the desired level of sludge and undesirable nutrients. Acti-Zyme Products do not compensate for mechanical failures, tree roots or blockages from non-soft organic material.*

Septic Tank Treatment Concentrated, All Natural Ingredients

With Acti-Zyme's Septic Tank Treatment you will never have to worry about clogged, or backed up tanks ever again.

65 Years of Proven Success

Easy to Use!

Follow this simple step process to insure your septic system is free and clear of any sludge buildup:

1. Open the Acti-Zyme Septic Tank Container
2. Pour into the toilet the directed amount of scoops per the size of Septic Tank
3. Flush the toilet and let the Live Active Enzymes and Microbes go to work!
4. Repeat the steps above every week
5. Complete Steps 1-4 during longest period of non-use.

Dosage Guidelines

Suggested maintenance treatment for normal working systems is one scoop (Two Tablespoons) per week for a 1000 gallon tank.

For any system that is experiencing problems such as overloading or flooding please see the additional guidelines on www.ActiZyme.com.

Acti-Zyme's Septic Tank Treatment restores overloaded systems, reduces sludge build up, decreases excessive odours, and protects the environment.

Proper Care of System

Septic tank systems need proper care and attention. It is important to never put harsh chemicals, and any non-organic materials down the drains.

If there is excessive dumping of meat fats, lard, cooking oil, grease, antibiotics and other fatty materials additional product will be required.

Recommended By Home Owners

"In the two weeks that I have been using your product (at the recommended initial dosage of 3 scoops per night), I have noticed **NO ODOR** at all coming from the tank area in our back yard! **I am beyond thrilled**, as this has been an ongoing issue that I thought would never be resolved. I was to the point of wanting to sell my home (which I love), with my beautiful back yard and swimming pool, to find a home that was on a sewer system! I have tried many products over the years, both chemical based and naturally based and Acti-Zyme is the **ONLY** product that has delivered on its promise! I will be a customer for as long as I own a home with a septic system."

Sherri (Kelowna, BC)

Environmentally Safe

Acti-Zyme products are environmentally friendly and contains only non-hazardous material and non-pathogenic microbes.

It will not harm pipes or fixtures in fact when used in a line or an interceptor, it will increase its activity the full length of any line not blocked by non-soft organic matter. With proper use of Acti-Zyme it will keep lines and drain fields open and working effectively, avoiding potential back ups and polluting above and underground water.

Non-toxic, all natural, biological technology for rehabilitation and maintenance of septic systems.
